PROFILE

Frontend Developer with 3+ years of hands-on experience with React and TypeScript. I currently work on a multilingual Next.js e-commerce platform, developing business features and the application's server-side functionality using Next.js Server Actions and Zod to communicate with the backend API.

My personal projects also include server-side development, PostgreSQL, external API and LLM integrations, and deployment. I use AI-assisted tools such as Claude Code, and independently review, test and debug the code they generate.

Before IT I spent 12+ years in logistics and law, working with transport management systems, complex business processes, regulations and documentation.

EXPERIENCE

Frontend Developer

Xtuning s.r.o. (AgroEcoPower) | 09/2025 – present · Full-time · Jihlava (hybrid)

I develop a multilingual Next.js e-commerce and order management platform for several EU markets. Stack: Next.js 16 App Router, React, TypeScript, Tailwind CSS, HeroUI, next-intl.

- **Server-side development:** implement and extend Next.js Server Actions with Zod validation that call the company's backend API and handle its errors.
- **Payments and business logic:**
  - implemented payment flows, including the payment status page;
  - implemented EU reverse-charge VAT logic based on VIES verification.
- **Access control:** extended RBAC with multiple roles per user, plus configurable roles for language-specific blog administration and for marketing.
- **Admin and content features:** order management, blog/news administration with ISR, banner management and multilingual features.
- **Security and troubleshooting:**
  - HTML sanitisation against XSS;
  - checking uploaded files by their content (magic bytes);
  - diagnosed failing large uploads and adjusted the request-size limits in both the proxy and Next.js Server Actions.

Internal component library (monorepo, Next.js 16, React 19)

- Take part in migrating a legacy component library from HeroUI to shadcn/ui and Radix UI.
- Migrated the org chart component and the rich-text editor to Tiptap v3. The editor migration involved separating Server and Client Components and replacing HeroUI controls with Radix UI.

Internal invoicing service

- Developing a React (Vite) application to replace a legacy invoicing module.
- Invoice overview with search, sorting, filtering and selection.
- Import of accounting exports (ISDOC XML invoices and CSV data), file validation and import error reporting.
- Analysed the legacy module and documented the scope and proposed design of the replacement.

Frontend Web Developer

WeFriiends | 10/2023 – 01/2026 · Remote, freelance

Team project: a social web application for a charitable organisation.

- Developed application features in React and TypeScript in a distributed team.
- Built a real-time chat feature with Firebase, and integrated REST APIs.
- Collaborated with designers in Figma. Worked with Git and pull requests, and wrote basic SQL queries.

TECHNICAL PROJECTS

Snaprime (2026) — LLM-powered web application, built solo end to end

GitHub: github.com/Regi25/snaprime | Demo: snaprime.pages.dev
Stack: TanStack Start · TypeScript · PostgreSQL (Neon) · Drizzle ORM · Groq LLM API · Browserless · Cloudflare Pages

The application extracts a website's content, builds a structured brand profile from it and generates ad copy that the user can edit.

- Designed and implemented the application end to end, including server functions, the database schema, API integrations and deployment.
- Implemented a multi-step server-side pipeline: website extraction → brand profile generation → ad generation.
- Used Browserless as a fallback for JavaScript-rendered pages, and split processing into separate steps to stay within Cloudflare's execution time limit.
- Validated structured LLM output with Zod before saving it to PostgreSQL.
- Added grounding rules so that generated content is based only on text extracted from the source website.

Praetor (2026) — legal-tech prototype: subject management module

GitHub: github.com/Regi25/praetor | Demo: praetor-tan.vercel.app
Stack: React · TypeScript · Vite · Tailwind CSS (frontend prototype with mocked data)

- Designed a data model that keeps a subject's master record separate from its link to a case file, so one subject can appear on several files in different roles.
- Implemented a mock ARES company search by company ID, with debounced input and protection against stale responses.
- Implemented type-safe form and modal state, plus accessibility support (focus management, keyboard navigation).

PREVIOUS CAREER

Transport Coordinator

Corax | 08/2020 – 08/2025 · Full-time · České Budějovice

- Organised transport for major logistics clients using transport management systems (TMS).
- Coordinated communication between drivers, dispatchers and departments.
- Set up and simplified internal administrative procedures, and ensured regulatory compliance.

Head of Department, Lawyer

Administrative Office, Russia | 09/2007 – 01/2019 · Full-time · Ufa, Russia

- Led a team and was responsible for the department's results.
- Provided legal support, document analysis and administration.

SKILLS

Frontend: React · Next.js (App Router, Server/Client Components, ISR) · TypeScript · JavaScript · Tailwind CSS · shadcn/ui · Radix UI · HeroUI · React Hook Form · next-intl · Vite
Server-side & data: Next.js Server Actions · server functions (TanStack Start) · Zod · REST API integration · PostgreSQL (Neon) · Drizzle ORM · SQL (basic) · Firebase · RBAC
Integrations: payment gateways · VIES · Groq LLM API · Browserless
AI: LLM integration with structured output validation · AI-assisted development (Claude Code)
Deployment & tools: Git · pull requests · code review · Cloudflare Pages · Vercel · Figma
Also studied: Flutter · Dart (course projects)
Languages: Russian (native) · Czech B2 · English B1/B2 (working proficiency)

EDUCATION

CanSheCode — Advanced Flutter Development Course · 2024 – 2025
Mobile app development, UI and state management in Flutter and Dart.

Czechitas, Prague — Digital Academy: Web · 2022
Intensive course in HTML, CSS, JavaScript, React and UI/UX.

Bashkir State University, Russia · 2002 – 2009
University degree in International Relations and Law.
